

Krishna of Vedic Era & Krishna of Mahabharata Era:
Two Different Persons

THE BIRTHDATE OF DEVAKIPUTRA KRISHNA (25 MAY 11153 BCE)

Devakiputra Krishna, a disciple of Ghora Angirasa flourished during Rigvedic era around 11150-11050 BCE whereas Krishna of Mahabharata era, a disciple of Sandipani lived around 3223-3126 BCE.

Harivamsha's Vishnu Parva mentions two verifiable astronomical references related to the date of Kamsa-Vadha. While replying to Kamsa, Andhaka tells us that Mars had already completed retrograde motion between Svati and Chitra nakshatras. He also mentions that a comet crossed 13 nakshatras starting from Bharani.

Stellarium simulation shows that Hailey's Comet was in Bharani on 10 Sep 11143 BCE (Apparent Magnitude 8.5). It moved to Purva Bhadrapada in Jan 11142 BCE. During the period from 21 Jan 11142 BCE to 21 Feb 11142 BCE, Hailey's Comet crossed 180 degrees from Purva Bhadrapada nakshatra to Purva Phalguni, exactly 13 nakshatras. It perfectly corresponds to the astronomical details given in Vishnu Parva of Harivamsha.

Mars was also on retrograde during May-July 11142 BCE.

According to Puranas, Sri Krishna killed Kamsa close to the tithi of Magha Amavasya when he was 11 years 6 months old. Considering the verifiable astronomical details, Sri Krishna killed Kamsa on 24 Nov 11142 BCE, Magha Amavasya.

Accordingly, Sri Krishna was born on 25 May 11153 BCE, Shravana Krishna Ashtami, Rohini Nakshatra. Saturn and Jupiter were on exaltation. Saturn was at 20 degrees in Libra and Jupiter was at 2 degrees in Cancer. Moon was also on exaltation in Taurus. Sun and Mercury were in Leo. Amazingly, Harivamsha gives exact astronomical details related to the year of Kamsa Vadha.
